

Online live course: Human Anatomy of Torso and Limbs

Build solid human anatomy

Pioneering anatomists

Artists like Leonardo da Vinci and Michelangelo understood that to master form, they had to study structure.

Through their drawings and notes, they laid the foundations of anatomical art—creating studies that captured not just the surface, but the inner workings of the body: bones, muscles, proportions, and harmony.

These works remain timeless because they reveal a way of seeing—a bridge between science and creativity that still inspires artists today.

This course follows that same spirit, bringing anatomical knowledge to the hands of modern creators through a visual and artistic approach that respects tradition while embracing new tools and technologies.

The significance of anatomical understanding

Whether you're creating stylized characters or pursuing anatomical realism, understanding the human body from the inside out brings depth, accuracy, and credibility to your work.

When an artist truly understands the structure beneath the skin, they can invent, exaggerate, or stylize with confidence—because their choices are informed, not improvised.

The body is not just form, its function. Knowing how bones, muscles, and fat interact improves the way we sculpt movement, weight, and personality.

Who teaches the course?

The course is taught by Rafa Zabala, an artist and educator with an uncommon journey that bridges the worlds of sculpture, digital creation, and academic anatomy.

Rafa began his artistic path over three decades ago through traditional sculpture, working on large-scale artistic and religious commissions. His passion for form and structure eventually led him into the digital world, where he became a character and creature artist for some of the most prestigious studios in the film and video game industries.

His credits include major productions such as *The Hobbit*, *Planet of the Apes*, *Avatar: Frontiers of Pandora*, and collaborations with filmmakers like George Lucas and Steven Spielberg, as well as global icons like Paul McCartney and Lady Gaga.

Over time, his fascination with the human body evolved into a deeper exploration of anatomy, guiding him back to the foundations of form. Rafa now collaborates with the Faculty of Medicine in Valencia, assisting in cadaver-based anatomy courses and developing anatomical learning tools for medical education.

Combining his hands-on experience in dissection with decades of sculptural expertise, Rafa offers a unique perspective—equally visual, structural, and artistic. His teaching is direct, inspiring, and built to empower digital artists with a clear, intuitive understanding of the human body.

"Anatomy is not just science, it's the language of form. And once you speak it, you sculpt with purpose." RZA

Instructor
Rafa Zabala

- Founder of Rafa Zabala Anatomy
- Traditional sculptor
- Character and creature modeller
- Art Director
- Anatomy instructor

Anatomy as the driving force of my career

Since an early age, I've been passionate about anatomy. Its study and observation have always guided my artistic path.

What began as curiosity became a lifelong journey—from traditional sculpture to digital characters and creatures in film and games.

Today, my work reflects a deep anatomical foundation, not only in human forms but also in animals and imaginary beings. Recent years teaching at the University of Valencia and working with real human anatomy have brought new depth to my creative vision.

Bridging the Gap Between Entertainment and Anatomy

De trabajar en «El Hobbit» a desarrollar simuladores aplicados a la medicina

► El escultor digital valenciano Rafa Zabala crea prototipos, que se pueden utilizar como práctica para los estudiantes o para reproducir posteriores intervenciones ► El artista recrea todas las capas del tejido humano con distintos materiales

SABÍAS QUE...
 ■ El escultor digital valenciano Rafa Zabala ha trabajado en distintos proyectos audiovisuales como las películas *El Hobbit*, *El amanecer del planeta de los simios* o *Maria Brava*, el último videojuego de la fricción de *Avatar*, la serie *Alcornoque* abordando o en espectáculo de artes escénicas internacionales como Lady Gaga, Ariana Grande, Paul McCartney o Britney Spears. La mayoría de sus trabajos están influenciados, como el mismo reconoce, por su pasión por la anatomía. «Mi experiencia y mi gusto la voy como artista se basa en todo lo relacionado con personajes, humanos, animales o criaturas imaginarias», reconoce.

Esta pasión ha comparado que el valenciano haya decidido dar un paso más en su trabajo. Concretamente, el escultor ha ido recreando los personajes para estos proyectos audiovisuales, sino que estas reproducciones también se pueden aplicar a la ciencia y la medicina. «Los programas de medicina o cirugía pueden utilizarse en muchos sectores», reconoce. En este sentido, Zabala explica sus conocimientos para recrear el cuerpo humano, ya sea parcial o totalmente. «Recreamos copa por copa de manera digital y luego lo imprimimos», explica.

Estos simuladores se pueden utilizar como práctica para los estudiantes o para reproducir posteriores intervenciones, que pueden tener un mayor grado de fidelidad. En este sentido, se puede recrear de manera fiel para un caso médico para poder aplicarlo posteriormente al paciente. El escultor recrea las cosas que necesitarías con distintos materiales según la parte del cuerpo que quieras producir. Por ejemplo, en el caso de la musculatura, lo que se contrasta con resina.

Los trabajos cuentan con un certificado médico para reflejarlo de la manera más fiel posible.

para que el especialista pueda realizar cortes. Por su parte, los huesos también se hacen con este material para que se puedan romper, mientras que los tejidos blandos se hacen con diferentes siliconas que recrean las distintas orgánicas. Reconoce que no es un proceso sencillo, aunque depende de la parte recreada. «Hay modelados que pueden tardar desde meses en realizarse, ya que hay un proceso de prueba y error detrás», señala.

PROCESO LABORIOSO
 El proceso de creación puede durar meses, ya que se reproduce de manera fiel para la parte del cuerpo humano o deseada, «Hay un proceso de prueba y error detrás de cada trabajo», señala. Levante 2021

Tratamiento de migrañas
 Zabala y el resto del equipo trabajan para el resto de los laboratorios médicos. Entre los distintos proyectos, destacan los simuladores para las operaciones de cirugía para las operaciones de migraña o la labiooplastia. Uno de los trabajos cuentan con un certificado médico, ya que en sus palabras, «simulamos el relieve de la mano más fiel todas las capas del cuerpo humano». Para ello, el valenciano, que ya había tenido conocimientos de anatomía artística, asiste periódicamente a sesiones de docencia anatómica en la Facultad de Medicina con el apoyo del director de anatomía y embriología de la facultad. «Es importante profundizar porque hablamos de un uso médico. Por lo tanto, el programa que no solo sirve para crear contenido de entretenimiento, sino que tiene un amplio abanico de posibilidades», reconoce.

Zabala empezó como escultor tradicional creando grandes figuras para galerías. Sin embargo, hace cinco años decidió dar un paso más y empezó a trabajar en programas de animación tras realizar algunos programas en el ordenador. Tras participar en varios cursos, en la actualidad trabaja como modelador en distintos proyectos audiovisuales.

I've found a deep sense of purpose in my path as both an artist and educator.

This journey has taken me across countries and cultures, connecting me with amazing people along the way.

At the heart of it all is my passion for anatomy—the driving force that led me to explore new creative horizons and eventually feel at home among doctors and surgeons, who now embrace me as one of their own.

They have become my mentors in a more demanding anatomical stage, offering knowledge that has profoundly shaped my perspective.

I believe every artist can benefit from a solid foundation in anatomy, and I'm here to share that knowledge with those who wish to truly understand the human body.

Who is this course for?

This course is designed for artists interested in gaining a deeper understanding of the form, proportion, and structure of the human body. It is ideal for digital artists such as 3D modelers, character designers, and concept artists, as well as traditional artists working with clay or plasticine whether at large scale or in miniatures.

No prior knowledge or specific preparation is required, as we start from the fundamentals to build a comprehensive understanding of the musculoskeletal system. We will study each region step by step, from the skeletal structure to its surface expression, analyzing muscle insertions and functionality.

This course offers an academic experience designed to help artists reconnect with anatomy and build solid foundations for creating believable characters, whether realistic or fantastical.

Anatomy is essential knowledge, but it can fade if not maintained. That's why this intensive training is designed to restore clarity, confidence, and purpose to your anatomical understanding, with passion, rigor, and experience

Why This is the Course You've Been Looking For

Learning anatomy shouldn't be a cold, mechanical, or overly theoretical process.

This course is an experience designed for artists who want to connect with the human form through understanding and sensitivity, without getting lost in technical jargon, but also without sacrificing accuracy and depth.

You'll gain more than just knowledge:

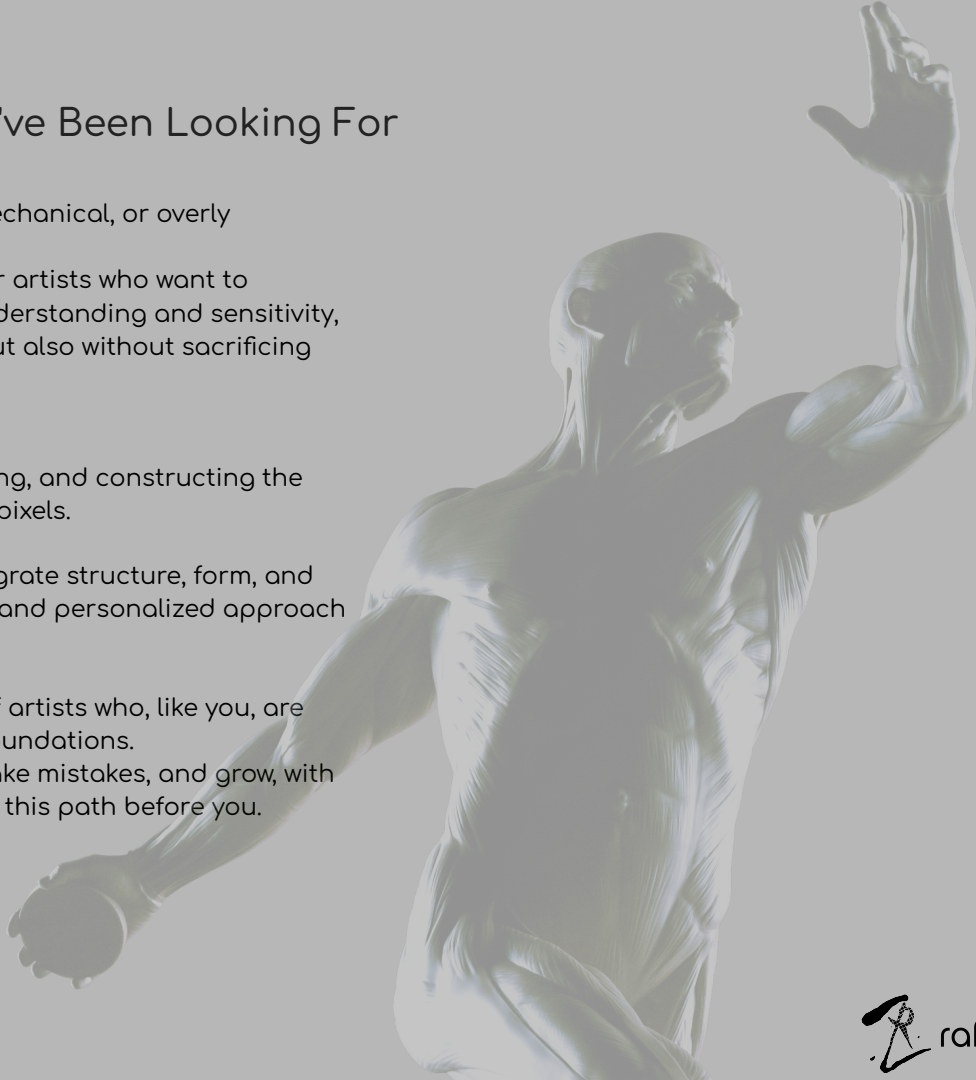

You'll gain a new way of seeing, interpreting, and constructing the human body, whether you work in clay or pixels.

Each session is designed to help you integrate structure, form, and proportion with clarity, thanks to a direct and personalized approach tailored to your creative process.

You'll also become part of a community of artists who, like you, are driven to create with purpose and solid foundations.

A space where you can ask questions, make mistakes, and grow, with the guidance of someone who has walked this path before you.

This course won't just improve your work.
It will change the way you understand it

Program Overview

Over the course of 8 live sessions, we'll break down the forms, proportions, and structures that define the anatomy of the torso, arms, and legs, blending artistic observation with applied anatomical knowledge.

Includes:

- A base skeleton model in .OBJ format
- Live classes, support with personalized feedback and Q&A

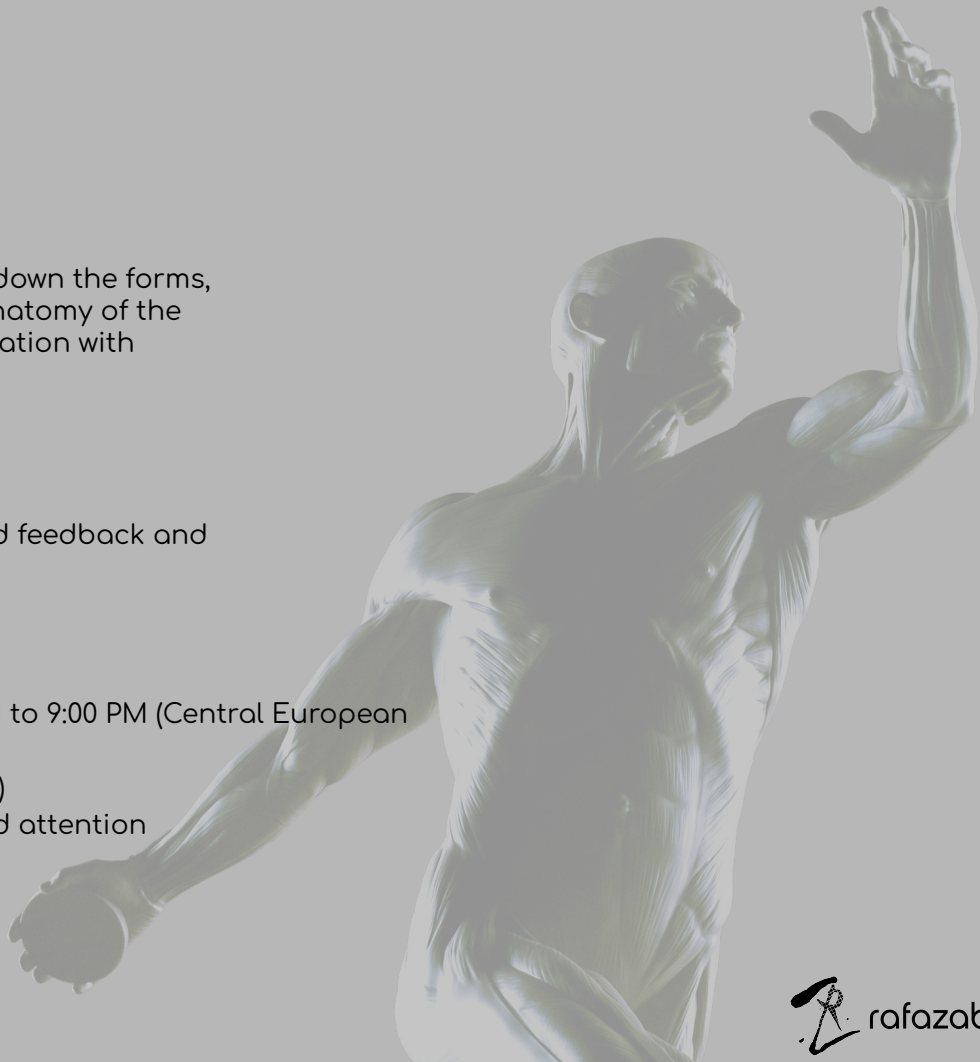

Total duration: 4 weeks / 16 hours

Frequency: 2 session per week of 2 hours,

Schedule: Monday and Thursday from 7:00 PM to 9:00 PM (Central European Time - CET)

Format: Live online sessions (videoconference)

Limited spots available to ensure personalized attention

Session 1

- Complete Osteology of the Body
- varied skeleton modeling

Session 2

- Complete leg musculature
- Varied leg modeling

Session 3

- Thoracic musculature
- Modeling the thorax and posing live

Session 4

- Full arm musculature
- Varied modeling of the arm

Session 5

- Proportions and canons
- Modeling the Effects of Age on the Body

Session 6

- Style differences in a character
- Modeling transition from realistic to cartoon

Session 7

- To create a character
- Modeling Zombies, orcs, etc

Session 8

- Course review
- Review of the work done by the students
